

Leveraging AI in a Shift Left Environment Wokshop

Jennifer Rose

Leveraging AI in a Shift Left Environment

Using AI without eliminating critical thinking

How to create prompts with meaningful context

Creating reusable assistants in different models

Common pitfalls

GitHub repo: <https://github.com/jennywren-mee/ai-workshop.git>

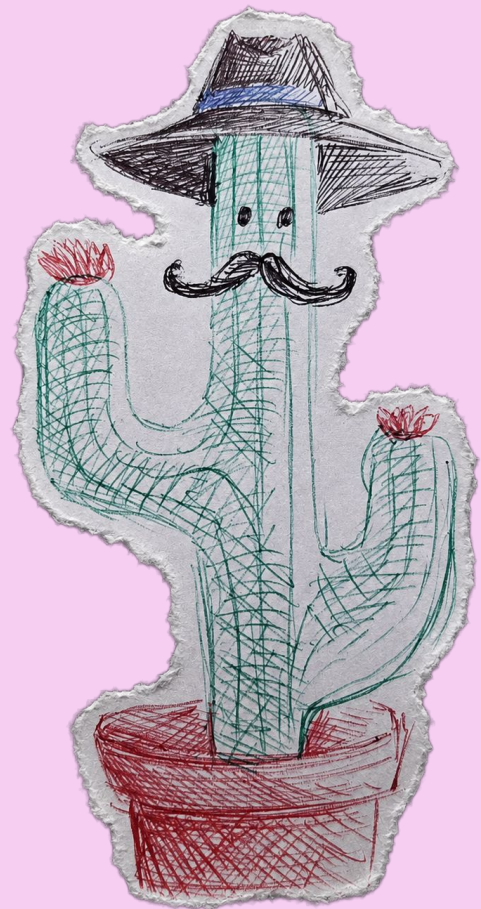

About Me

- 10+ years as QA
- Cat “owner”
- Roller derby captain
- Board gamer
- Crafter

Shifting Left

Addressing quality earlier in the development lifecycle to enable quicker, more efficient builds.

GitHub repo: <https://github.com/jennywren-mee/ai-workshop.git>

The Task

Create a backlog of tickets to cover all user journeys for an eCommerce store

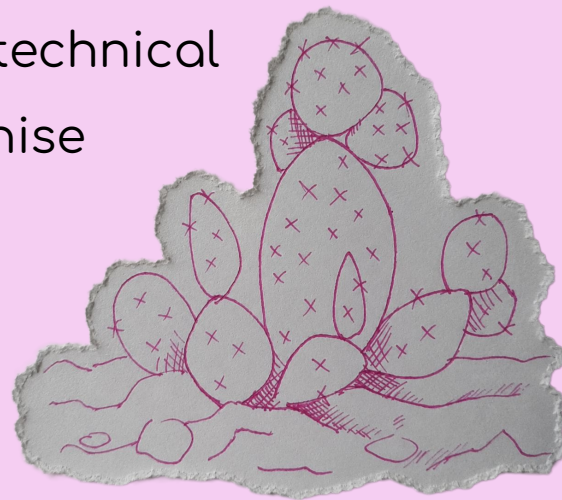

The Context

What to include:

- Business context
- QA skills
- Testing principles
- Testing aspects
- Conditions
- Examples (good and bad!)

Include what NOT to do as well!

- Specific language to avoid
- Don't be too technical
- Don't solutionise

*The Original Article

- AI is not perfect
- Treat it like a junior
- Read the output!!!!
- Refine

Workshop Task

GitHub repo:

<https://github.com/jennywren-mee/ai-workshop.git>

1. Copy a skill prompt from the repo into your preferred model
2. Add a user story, feature name or prompt
3. Check the output
4. Change the skill instructions and try again

Taking it Further

- Creating an assistant, skill or agent
- Harness business logic in your repository to enhance the context
- Hook it up to an MCP to automate repetitive tasks
- Chaining skills to create development and testing workflows

Summary

Getting from 0 - 90% fast, AI can get you there

ABCs - Always Be Checkin'

Don't be afraid to iterate!

Thank you!
